

INSTALLATION IS FAST AND EASY

With DRIcore® Subfloor's patented technology and one-step installation process you can put your floor together in far less time than you might think.

The conveniently sized 23½" x 23½" x 7/8" (59.7cm x 59.7cm x 2.2cm) modular panels:

- Press-fit together quickly and easily - so there is no edge fastening or adhesives required
- Are easy to handle - these lightweight tongue and groove subfloor panels can be installed in most basements in an afternoon

Refer to back page to find out how many DRIcore® panels and leveling kits are required for your project.

How many DRIcore® panels and leveling kits do I need?

Use this simple formula to determine the number of panels and leveling kits required for your project.

$$\text{Room square footage} \div 3.3 = \text{Number of panels required}$$

We recommend one leveling kit for every 60 panels.

25 YEARS OF SOLID PROTECTION

It's one thing to lay down a great subfloor, and even better to know that you are protected by our warranty for many years to come.

WHY DRICORE® SUBFLOOR?

DRICore® is the first and most important step towards creating a new living space as warm and comfortable as any other space in your home. DRICore® is the one-step engineered subfloor solution that is specifically designed for basements. The raised moisture barrier covers cold, damp concrete to protect, insulate and cushion your finished floors.

How the DRICore® Subfloor technology works

Concrete continually releases moisture. DRICore® Subfloor panels have been designed with air gap technology to keep basement floors dry, comfortable and cozy throughout the entire year. The air gap encourages constant air flow and evaporation of surface moisture emitted from your basement concrete floor.

Expand your living space in comfy cozy style

You will be warm and dry in your new basement space with finished floors that are up to 3.2°C (6°F) warmer. DRICore® Subfloor ensures a **healthy environment** for you and your family by limiting moisture that can lead to mold.

DRICore® Subfloor panels are strong enough to take up to 4,000 lbs per square foot. That means you can have a fantastic recreation room for the kids, home gym, games room or perhaps the home theatre of your dreams! **Add your favourite finished floor – think carpet, laminate, engineered hardwood, tile or vinyl.**

Another option is to leave the DRICore® as is and simply finish with a polyurethane coating for a great storage area or a place for the kids to play! **Let us show you how you can have a strong, clean and stable subfloor that you can count on - guaranteed.**

SMART

- DRICore® promotes good indoor air quality by allowing your concrete to breathe which in turn reduces the potential for mold and that basement smell
- DRICore® dramatically improves the quality of your living environment through cold and dampness protection
- DRICore® keeps your family warm and dry, while protecting furniture, flooring and electronics from basement moisture
- DRICore® protects the investment you made in your basement and your home

EASY

- DRICore® Subfloor panels are the fastest, easiest way to maximize the use of your home, and add additional value to your largest financial investment
- A typical 500 square foot basement installs in an afternoon so you can spend more time with your family
- DIY Approved means that anyone can install a DRICore® Subfloor

IMAGINE THE POSSIBILITIES

With DRICore® Subfloor panels you can transform your cold, damp basement into an exceptionally comfortable living environment that will add value to your home – and that's a great investment.

See for yourself what a difference DRICore® can make to your home today!
